

# Digital Controller for Analogic signals

2 contacts or NPN transistor input

simultaneous OUTPUTS  
0/10V + 0-4/20mA

SUPPLY  
24 VDC  
90.. 240VAC

WITH PLUG-IN CONNECTORS

**Description**  
Variable analog generator, with simultaneous outputs to 0-4... 20mA and 0... 10V, increases or decreases proportionally to the actuation time, with the UP/DOWN contacts

SUPPLY	
90 .. 240 VAC	20%
24 VDC +/-	0,6 VA

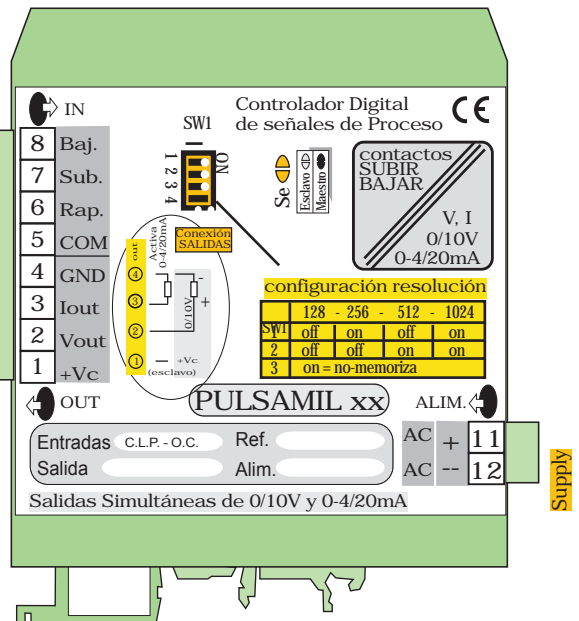

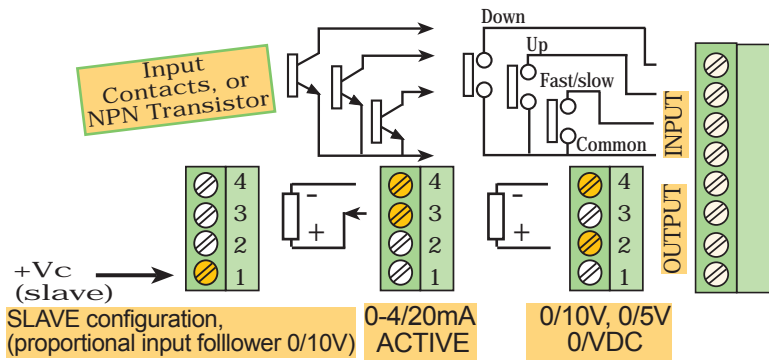

- Applications**
- ▲ Prefix setpoints with precision, with the possibility of remote self-correcting and digital indication.
  - ▲ Variable ramp generation (control acceleration/deceleration).
  - ▲ Monitored potentiometer substitution.
  - ▲ Simultaneous setpoint control from different points
  - ▲ Control vain detectors.
  - ▲ Dimming in electroplating baths.
  - ▲ Continuous flow control and speed through 2 digital outputs

**References**

Supply	0/10V	4/20mA
90..240VAC	PULSAMIL12	PULSAMIL42
24VDC	PULSAMIL10	PULSAMIL40

# Connections

## Characteristics

- ▲ Memorizing output disconnections. selectable
- ▲ 2 speed variation: Fast and slow.
- ▲ Automatic set, maximum or minimum value.
- ▲ Control input 2 + 1 voltage free contacts or NPN transistor.
- ▲ Configurable resolution in the output up to 1024 steps.
- ▲ Output voltage 0 / 10V and 0-4 / 20mA.

## Input

2-3 free of potential contacts  
or  
2-3 NPN transistors, open collector  
(absorption current 5mA)

## Output

CURRENT	VOLTAGE
4/20mA	0/10V
0/20mA	0/5V
LOAD CAPACITY	
< 650Ω	> 1KΩ

<b>Zero</b>	Initial scale adjustment (4 or 0mA, 0V)	+/-10%
<b>Span</b>	Full scale adjustment (10V, 20mA)	+/-10%
<b>Time</b>	Delay adjustment (0,2... 1,3sec)	

## Configuration for the resolution

4 possible configuration (128, 256, 512, 1024).

## Resolution configuration memorize when disconnect

SW1	128	256	512	1024
1	off	on	off	on
2	off	off	on	on
3	on = no-memorize			

## Desconnection memorization

OFF= memorize the last value of the output when disconnected. Starts with this value when connected again  
ON = doesn't memorize the last value, when reconnected, starts from the initial scale (0V, 0mA or 4mA).

## Response speed

The variation speed of the output signal can be selected in two modes:

- 1 - FAST: Response time 50ms. For control through PLC. (Rap.+ COM together).
- 2 - SLOW VARIABLE: Adjustable through frontal potentiometer "Time". (Rap not connected ) Adjustable between 0,2... 1,3 sg.

\* Between Rap. and COM, can be introduced, optionally a button for fast/slow modes, is really useful for quickly approaching the setpoint. If not used, you can leave the air, thus acting variable slow mode from the front "Time" setting.

## MECHANICAL

Protection:	IP 20
Connection wire:	<2,5mm, 12 AWG
Box:	Polyamide UL94. V2
Wide	22.5mm
Rail:	EN 50035, EN 50022

## REGULATIONS COMPLIANCE

Electromagnetic Compatibility	2004 / 108 / CE
Low voltage for amb. industrial	2006/95/CEE
Electromagnetic emissions	UNE-EN 50081-2
Electromagnetic immunity	UNE-EN 50082-2
Waste electronics(WEEE)	2002 / 96 / CE

**REPLACING SETPOINT POTENTIOMETERS BY ROBUST PUSHBUTTON**

\* With process variable indication \*

**CONTINUOUS FILLING CONTROL, WITH VARIABLE OUTPUT**

**CURRENT CONTROL IN PLATING BATHS**

**CONTROL OUT IN VAIN PLASTIC EXTRUSION**

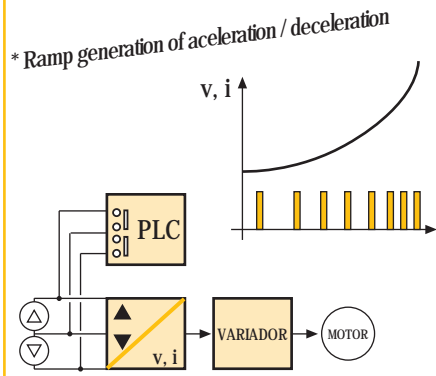

**SETPOINT CONTROL SIMULTANEOUSLY FROM DIFFERENT POSITIONS**

**FLOW CONTROL REGULATION IN CONVEYORS**

**CONTROL OF SPEED SETPOINT THROUGH PLC DIGITAL SIGNAL**

**TIME CHARACTERISTICS**

tm	Min. time of the input pulse	40ms
Response to a continuous pulse input	Slow	Fast
The output changes a thousandth every:	0,2 - 1,3s	50ms
<b>SETTING TO MAX / MIN</b>		
Working simultaneously through 2 inputs (min 200ms) and deactivating firstly UP / DOWN		
maintaining the other one during, at least 40ms		
The output will reach the las value at 100ms		
A LED indicates the output variation		

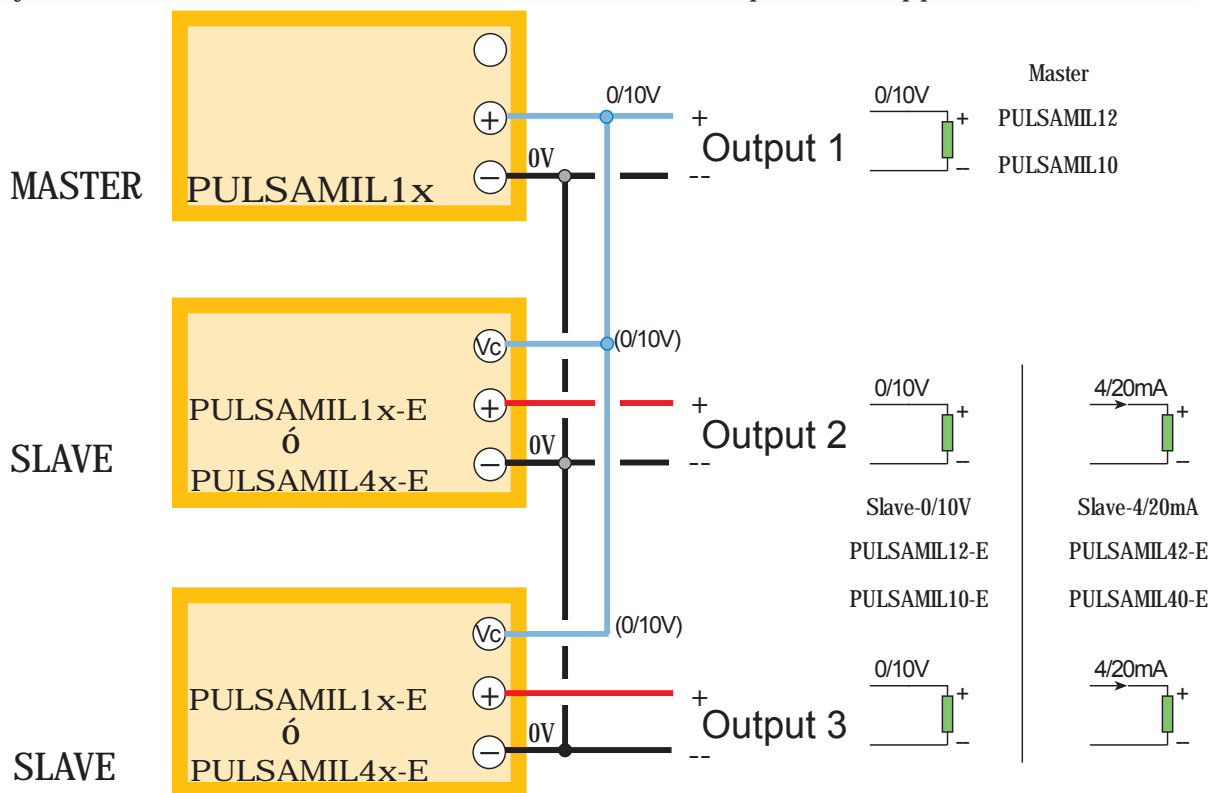

## APPLICATION

### \* SYNCHRONISM WITH MULTIPLICATION (FACTOR)

- The PULSAMIL-Slave always follows the reference signal + Vc.
- The reference + Vc, should be 0..10V, which can be generated by a PULMAMIL-Master, by a potentiometer or an external signal.
- The PULSAMIL-Slaves, vary in proportion to the same setpoint (+ Vc = 0..10V).
- The output multiplier factor is controlled by the inputs "up / down"
- The multiplier factor can have any value between 0 .. 100% of the input.
- To preserve the multiplier factor must be configured with Memorizing the disconnection.
- The maximum output can give is limited to 100% of the input.

### Note.-

The control voltage (Vc) that enters the slave, is with reference to its mass.  
Pay attention to the case of slaves with 4 / 20mA output and supplied with 230VAC.

## Advantajes

- ▲ Fully electronic, no mechanical problems.
- ▲ Compact, space-saving and consumption.
- ▲ Greater flexibility and precision control.
- ▲ Setpoints through robust pushbuttons, with precision variations by steps.
- ▲ Remote control and a variable multipost.
- ▲ Reliable transmission of setpoints over long distances (4 / 20mA)

## AMBIENTALS

Working temp.	-10 / +60 °C
Storage temp.	-40 / +80 °C
T <sup>a</sup> coefficient	50 ppm / °C
Warm up time	5 min.
